## **DETAILED ACTION**

1. Applicant's amendment filed 7/5/05 has been entered and made of record.

Applicant's amendment and remarks overcome the rejection of claims 8-10 and 19 under section of 35 U.S.C. 112, 1<sup>st</sup> paragraph.

Applicant's arguments, see last 7 lines of page 11 to first 4 lines of page 12, filed 7/5/05, with respect to the rejection of claims 1 and 11 under section 35 U.S.C 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Kawamura et al. [USPN 5,719,982].

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art (see figure 1 and its corresponding text portion on last two paragraphs of page 1 to first two paragraphs of page 3. Referred as the AAPA hereinafter) in view of Kawamura et al. [USPN 5,719,982], further in view of Fields et al. [USPN 6,771671].

Regarding claims 1, and 11 the AAPA teaches an apparatus for transmitting a graphic signal generated by a graphic signal generation unit to a display unit [see figure 1: transmission unit 11, reception unit 12, and display unit 132] the apparatus comprising:

a transmission interface unit which: compares a current graphic signal with a previous

Art Unit: 2621

graphic signal and compresses the current graphic signal to generate transmission data based on the comparison, modulates the transmission data together with header information into an optical signal for transmission via a single channel; and transmits the optical signal [see transmission unit 11 of figure 1];

a reception interface unit which regenerates a graphic signal based on the transmission data and header information contained in the optical signal and transmits the regenerated graphic signal to the display unit [see reception unit 12 of figure 1].

While the AAPA teaches a transmission interface unit, the AAPA does not explicitly teach: compares a current graphic signal with a previous graphic signal and compresses the current graphic signal to generate compressed transmission data based on the comparison, modulates the transmission data together with header information into an optical signal for transmission via a single channel. However, such features are well known in the art as evidenced by Kawamura et al.

Kawamura et al. teaches: compares a current graphic signal with a previous graphic signal and compresses the current graphic signal to generate compressed transmission data based on the comparison [see col. 2 lines 54-56], modulates the transmission data together with header information into an optical signal for transmission via a single channel [see MOD 53 of figure 7].

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the claimed features as taught by Kawamura et al. in combination with the AAPA in order to effectively increase the compression efficiency as suggested by Kawamura et al. in col. 2 lines56-57.

Application/Control Number: 09/876,150

Art Unit: 2621

Page 4

While the AAPA teaches transmitting graphic data [see last three lines of page 1], the AAPA does not explicitly teach the use of optical transmission medium as a means for transmitting data. Using optical transmission is well known in the art as evidenced by Fields et al. [see col. 4 lines 35-36 and item 124 of figure 31]. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the conventional teachings ms taught by Fields et al in combination with the AAPA in order to allow faster transmission.

- 4. Claims 8-10 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. Claims 2-7, 12-18, and 20-30 are allowed.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duy M. Dang whose telephone number is 571-272-7389. The examiner can normally be reached on Monday to Friday from 5:30AM to 2:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Mancuso can be reached on 571-272-7695. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 09/876,150
